

## Reverse Camera Input Activation

To activate the Reverse Camera Input:

1. Locate blue plug on the harness that is on the same side as the magenta plug.
2. On the blue plug, in pin location 17, locate the White 1"-2" wire or the Brown 12" wire.
3. This wire must be connected to ground to activate the reverse camera input, when this wire is connected to ground, it will override the navigation display with the reverse camera input no matter what mode your navigation screen is in. It is better to hookup this wire via a relay. Please see picture below.

### Reverse Camera Install Instructions
